REPORT
ESO Department to Department Visit Programme 2018

Host Institution: Stroke Center, Inselspital, Freiburgstrasse 8, 3010 Bern, Switzerland

Thanks to the support of European Stroke Organisation I was able to visit Stroke Centre in Inselspital, Bern - a place with great tradition in participating in major stroke trials as well as students and physicians training.

During my stay I had the opportunity to investigate every step of acute and subacute stroke management. Starting with the patients’ arrival to the emergency department, I could observe the work organisation and procedures fulfilled before recanalisation and life decision making for thrombolysis and thrombectomy.

I was impressed by the Neuroradiology Department with the available 24/7 MRI suite using advanced sequences on an every-day basis. Thanks to Professor Jan Gralla and his team, I could observe thrombectomy procedures which were explained in details by operators.

Further steps of patients’ care were diagnosis and early rehabilitation in the Stroke Unit, which I had the privilege to visit for several weeks. During every – day morning rounds, each patient’s clinical problems and management were discussed in details. I found observing a current evidence-based individualised approach to every patient of great value for my future practice. I am extremely grateful to Dr. Simon Jung for sharing his professional opinions and enthusiasm in discussing complex clinical problems, starting with basic science through trial evidence to conclude in its application to everyday practice. Also, the possibility to study the range of internal Stroke Unit guidelines covering most of everyday clinical problems was very valuable.

Following the patients’ diagnostic path, I could observe work in Neurosonolab where I found structural as well as functional ultrasound imaging very interesting. Also, patients’ follow-up in the Outpatient Stroke Clinic was very didactic.

Likewise clinical practice, the doctors’ training made a great impression on me: daily morning mini-lectures, weekly meeting with neuroradiologists and neurosurgeons, as well as current studies reports.

I want to thank Dr. Mirjam Heldner for her constant help with every clinical problem, organisational challenges, and her kindness for showing me every corner of Inselspital and the beauty of Bern. I would like to express my gratitude to Professor Urs Fischer and Professor Marcel Arnold for accepting me at the Stroke Center. Finally, I am grateful for the support of the ESO which gave me this wonderful opportunity.

Sincerely,
Natalia Andrzejewska, MD
